MIT SECURES S\$6.7m NEW ORDERS, INCLUDING BREAKTHROUGH ORDER FROM A NEW SEMICONDUCTOR MNC CUSTOMER

Singapore, 19 November 2009 - Manufacturing Integration Technology Ltd ("MIT") is pleased to announce that the Group has received orders totaling S\$6.7m from its semiconductor equipment and contract equipment manufacturing (CEM) customers. Of particular importance is a significant order from a major semiconductor customer for its high-end range of die sorters used in the IC manufacturing and assembly process.

These orders will be booked during the current and next financial years. The Company is hopeful that this success especially with the new generation die sorters will pave the way for wider market acceptance as customers look for more powerful solutions to drive their production capacity when semiconductor demand ramps.

Whilst these orders will have limited impact on the current year's financial performance, it will certainly augur well for 2010's prospects. None of the Company's Directors or substantial shareholders has any direct or indirect interest in these sales contracts.

About Manufacturing Integration Technology Ltd

Incorporated in 1992 and listed on the Singapore mainboard in 1999, MIT is a leading provider of integrated automation solutions for the semiconductor industry worldwide. Its range of high-end equipment includes wafer level die marking, sorting and inspection systems. The Group has also diversified its business to provide contract equipment manufacturing and precision engineering services to the broader markets, with a footprint in Shanghai, China. It is now also designing and producing its proprietary range of solar equipment for the PV industry.
